The Problem

Every software team bleeds time.

-  **Cascade Bugs:** Hours lost hunting issues from 1 renamed variable.
-  **Code Bloat:** Dead code bloating repositories by
-  **Communication Gap:** Executives don't understand what shipped.
-  **3 AM Crashes:** Developers woken up to

Enter **Bob 360**

4 Core Modules. 1 Unified AI Guardian.

Domino Preventer

Stops cascade failures
BEFORE they happen across
your entire architecture.

Code Diet

Finds & safely removes dead
code and zombie packages.

The Secret Sauce

Why is this only possible with IBM Bob?

Standard AI tools only see a single *code snippet*. They act like glorified autocompletes.

IBM Bob sees the ENTIRE repository.

It understands your architecture, file dependencies, import chains, and git history.

Real Impact

What we achieved in this session:

1

54%

Cascade blocked: 4 critical files saved from breaking in

Lighter repo: Safely removed 5 files and 4 zombie packages.

Built by the Next Generation.

Huseyn Verdiyev & Farid Hashimli

We are two high school students from Azerbaijan, but we build like seasoned Silicon Valley engineers. While others are playing games, we are architecting solutions for real-world enterprise problems.

We don't just write code: we envision the future of software
